Indoor switch disconnector type NAL with earthing switch type E

NAL switch disconnecter production line

Foreword

NAL-type switch disconnectors are based on a modular principle, which gives it a wide range of functionality. With a unique design that extinguishes electric arcs and enables high switching capacity, they represent an attractive solution as a key breaking element for applications in enclosed switchgear and transformer compact substations. In combination with type CEF current limiting fuses, NALF fuse switch disconnectors ensure control over the full range of overload and short-circuit currents.

The main areas of application of NAL/NALF switch disconnectors are as:

- Line switch disconnectors in medium-voltage networks,
- Switch disconnectors with fuses for the switching and protection of:
 - Distribution transformers
 - Motors
 - Capacitor banks

NAL/NALF switch disconnectors are manufactured according to global quality and environmental standards and confirmed by ISO 9001 and ISO 14001 certificates. In addition, they are 98.64 percent recyclable.

The NAL/NALF brand is well known around the world, and more than 600,000 switches have been produced so far. It has been undergoing continuous development to satisfy users' demands.

1. Introduction

The switch disconnector system NAL/NALF is based on a modular principle. The basic unit consists of a frame with insulators and current carrying parts. Two different types of operating mecha-

nisms, snap action mechanism type K or stored spring energy mechanism type A, can be mounted on the frame. Fuse bases type F, with or without fuse tripping mechanism, and an earthing switch type E/EB, suitable for both direct mounting and free standing components, complete the basic equipment of a switch disconnector. These modules can be easily configured according to customer expectations.

Accessories, such as shunt trip, under-voltage release, auxiliary switches, motor operation and various systems for manual operation can easily be added.

2. Main product features

A NAL disconnector (which interrupts load currents up to 1,250 A) and a small fault-current circuit combined with a fuse base (F) and current limiting fuses (which break large short-circuit currents) create a NALF-type disconnector that provides protection against a majority of fault types in a modern electric network. Both NAL/NALF are designed in accordance with the requirements of the following standards: 60129, 60265, 60694, GOST 1516.3-96, GOST 17717-79, and CSA Standard No. C22.2, No. 193, and IEC 62271-105, all of which consider switches for general use and ensure there is safe switching coordination between a switch disconnector and a current limiting fuse.

Within the scope of the ANSI standard, NAL is known as VersaRupter and it meets the requirements of ANSI No. C37.20.4. The selected styles of NAL/NALF switch disconnector are listed as certified by the Canadian Standards Association (CSA). Some VersaRupter styles are UL listed prior to their release to comply with the relevant safety requirements required in regions of the United States.

3. Functional description

To ensure correct operation for all relevant currents, the switch disconnecter system NAL/NALF is equipped with a dual arc extinguishing system. As the current is being interrupted, the arc will be exposed to:

a) A current independent air blast which automatically starts at the correct time during the interrupting process. This is achieved by designing the insulators on the opening side as cylinders with pistons. The pistons are connected to the mechanism in the same way as the moving contacts. The air blast therefore starts simultaneously with the contact movement (autopneumatic air blast).

b) A current dependent gas blast which occurs when the walls of the arcing nozzles are exposed to the hot arc. During this process, large volumes of gas are released and the arc is effectively cooled. The concentration of the developed gas increases with increasing current. The so-called Hart gas effect is therefore most important at high currents.

A well balanced utilization of these two effects has resulted in an arc extinguishing system with high reliability for all relevant currents. Because of the autopneumatic air blast it will only be necessary to utilize the Hart gas effect for high currents. This gives an arcing system which can withstand a large number of operations without excessive wear. Consequently the NAL switches comply with the highest electrical performance classes E3 of IEC 60265-1 (for selected nominal voltages only). In addition, voltage ratings are tested with a hundred operations under a load rated current of 630 A, which is a very important feature of the product, distinguishing it from other apparatus of this type on the market.

4. Basic designs

NAL

The standard feature consists of chassis, insulators and current carrying parts with the following pole distance:

- 12 kV – pole distance 150 mm, 170 mm and 210 mm
- 17.5 kV – pole distance 170 mm and 210 mm
- 24 kV – pole distance 170 mm*, 235 mm and 275 mm
- 36 kV – pole distance 360 mm

* – with insulating barriers

Rated currents are:

- 400, 630 and 1250 A up to 24 kV
- 630/800/1000 A for 36 kV

NALF

Is delivered with the same pole distances as the standard feature.

Fuse base type F is delivered for installation on both the opening and pivot sides, with or without automatic tripping.

A fuse base with six insulators can also be delivered separately with some form of signal indication when a fuse blows or for installation on the pivot side of the switch.

5. Mechanisms

Type A with two springs

The opening spring is always charged before the switch can be closed by means of a closing spring. This means the opening spring is always charged in a closed switch, which in turn can be tripped immediately by hand, electrically or by a fuse-link striker system.

Type K with one spring

Closing or opening the switch is performed by charging the spring past the dead centre.

A and K mechanisms may cooperate with motor drives.

6. Earthing switch

Quick earthing switch type E

This type of earthing switch is equipped with a quick spring mechanism. It can be mounted on the pivot side of the switch disconnecter or on the fuse base when the latter is on the pivot side of the switch.

Quick earthing switch type EB

Designed to be an independent assembly for both sides of the disconnecter.

Earthing switch type LCES

This type of switch is not equipped with a quick spring mechanism. It can be mounted on the pivot side of the switch disconnecter or on the fuse base when the latter is on the pivot side of the switch.

Mechanical interlocking between the switch disconnecter and earthing switch is installed directly on apparatus' shafts. The left hand shaft extension is required for mechanical interlock installation.

7. Fuse bases and recommended current limiting fuses

Fuse base type F

Variable with or without automatic tripping of the switch by the fuse-link striker system. The fuse base can be mounted on both sides (i.e. opening side or pivot side of the switch).

Recommended current limiting fuses for switch disconnector type NALF and fuse base with fuse tripping system

ABB fuse types CEF and CEF-S are recommended for use with the NALF switch disconnector with fuse tripping system. These fuses are reference fuses as defined in IEC 62271-105. The selection of fuses to protect distribution transformers with appropriate assumptions about the working conditions and manner of selection are shown in the following tables.

Fig. 12 Quick type earthing switch type E mounted on fuse base

24	10	10	10	10	16	16	16	20	20	25	40	40	

The table was calculated according to standards IEC 60787 and IEC 62271-105 (for operating voltages up to 24 kV) and IEC 420 1990-11 for 36 kV. The following transformer work conditions were assumed:

- Maximum long-lasting overload – 150%
- Magnetizing inrush current – $12 \times I_n$ during 100 ms
- Transformer short-circuit voltage according to IEC 60076-5
- Standard ambient working conditions of fuses

The table above details the rated current of a particular fuse link for a given line voltage and transformer rating. For different criteria, the fuse selection must be recalculated..

The given limits of the rated current of fuse are not mandatory for use with NAL/NALF switch disconnector without fuse tripping system. Rated current values of the corresponding fuses for these applications are given in the ABB catalogue titled "Fuses."

8. Types Designation

NAL								Switch disconnector
	F							with integrated fuse base ¹⁾
		12						Rated voltage 12 kV
		17						Rated voltage 17.5 kV
		24						Rated voltage 24 kV

					235			Pole distance 24 kV
					275			Pole distance 24 kV
					360			Pole distance 36 kV
						R		Right hand side operation
						L		Left hand side operation ⁵⁾
							E	Quick-make earthing switch ⁶⁾
						LCS		Earthing switch
							L	For 24 kV with insulating barriers – left-hand operation only

¹⁾ additional information needed when placing the order:

- the length of fuse link
- mounting side - pivot or opening
- with or without fuse tripping

²⁾ for 36 kV only

³⁾ up to 24 kV only

⁴⁾ for 24 kV insulation barriers are used

⁵⁾ for left hand operation shaft extension must be used

⁶⁾ the earthing switch is normally delivered without mechanical interlocking, which must be specified separately. For 36 kV, earthing switch is provided as self standing only type EB.

General remarks for orders

- Normally, the switch disconnector is delivered with a fuse base for pivot side mounting. A fuse base for opening side mounting must be specified in the order.
- Closing or opening of the switch disconnector must be carried out by an operating coil. The coil must be ordered separately.
- For left-hand operation, a shaft extension must be used. The extension must be ordered separately.
- The earthing switch is normally delivered without mechanical interlocking. There is an additional charge for interlocking.
- The switch disconnector type NALF / NAL can be ordered at the same time, together with ABB current limiting fuse types CEF and CEF-S. Adequate ordering numbers for fuse links are available in the "Fuses" catalogue.

Ordering examples

– NAL 17-12K170LE

Switch disconnector for 17.5 kV /1250 A with latched snap action mechanism, pole distance 170 mm. The switch disconnector is left-hand operated and equipped with a quick-make earthing switch.

– NALF 24-6A235R

Switch disconnector for 24 kV/630 A with stored spring energy mechanism type A, equipped with fuse base on the pivot side, with fuse-tripping device, pole distance 235 mm, right-hand operated.

9. Technical specification

Switch disconnector type NAL

The switch disconnector complies with IEC standards 60129, 60254 and 60694 concerning general purpose switches and IEC Standards 420 and 62271-105 regarding correct co-operation between switch disconnector and fuse.

Fig. 18

Manual operation of HE consists of:

- a) lower part
- b) upper part
- c) connection rod

Please observe!

The mechanism shaft does not pass through the switch from the mechanism on the right-hand side to the left side. Instead a special extension shaft is needed for operation of the mechanism from the left-hand side.

- d) lower part for HE can be equipped with blocking coil for all standard voltages

Fig. 19

Shunt trip coil can be mounted on all A-mechanisms. This coil is available for the following voltages: 24, 48, 110, 220 V DC and 110, 220 V AC. It shall always be connected in series with an auxiliary switch, which disconnects the shunt trip coil when the switch is open.

Fig. 20

Mechanical interlocking between switch disconnector and earthing switch. At the earthing switch on the fuse base, the interlocking type (length) depends on the length of the fuse. Therefore, the fuse size must be stated.

Mechanical interlocking can also be used for switch disconnector and EB earthing switch.

Fig. 21

Auxiliary switch can be mounted on all switch disconnectors, max. 8NO and 8NC and on all earthing switches except LCES, max. 4NO + 4NC + connection kit for assembling.

Auxiliary contact for fuse interruption (Fig. 13)	1YMX053390M0001	0.1

14. Motor drives

Motor drives enable the remote opening and closing of switch disconnectors while at the same time they are prepared for the possibility of an emergency manual maneuver. A variety of models offers a selection of appropriate drive configurations. Drives type UEMC40A1 and A2 are designed to be installed on the front wall of the panel (left or right side). They can open and close switch disconnector mechanisms A and K, and are connected to the shaft of the switch disconnector by coupling ties

Shunt trip for A mechanism¹⁾

(including fixing parts) (Fig. 19)

Description/Type	Ordering number	Weight [kg]
Coil 220 VAC without auxiliary switch	1YMX054740M0001	0.6
Coil 110 VAC without auxiliary switch	1YMX054741M0001	0.6
Coil 125 VAC without auxiliary switch	1YMX054741M0002	0.6
Coil 220 VDC without auxiliary switch	1YMX054742M0001	0.6
Coil 110 VDC without auxiliary switch	1YMX054743M0001	0.6
Coil 125 VDC without auxiliary switch	1YMX054743M0002	0.6
Coil 48 VDC without auxiliary switch	1YMX054744M0001	0.6
Coil 24 VDC without auxiliary switch	1YMX054745M0001	0.6

¹⁾ In connection with shunt trip, auxiliary switch that breaks shunt trip circuit, must be used.

Spare coil for shunt trip for A mech

Description/Type	Ordering number	Weight [kg]
Coil 220 VAC	1YMX054250M0001	0.6
Coil 110 VAC	1YMX054251M0001	0.6
Coil 125 VAC	1YMX054251M0002	0.6
Coil 220 VDC	1YMX054252M0001	0.6
Coil 110 VDC	1YMX054253M0001	0.6
Coil 125 VDC	1YMX054253M0002	0.6
Coil 48 VDC	1YMX054254M0001	0.6
Coil 24 VDC	1YMX054255M0001	0.6

and bevel gears. The UEMC40A series is not recommended for NAL 36 – 36 kV with A mechanism.

Standard drive for NAL/F (Fig. 29) can be mounted directly on the shaft or switch disconnector or on the side wall of the panel. It cooperates with spring mechanisms A and K.

To mount the standard drive for NAL/F on the shaft of the disconnector, suitable supports brackets are needed (Fig. 28). The correct choice of brackets depends on the type of disconnector, drive and motor assembly as is shown in the table below.

Fig. 28 Space brackets for mounting of standard motor drive for NAL/F

The motor unit is mechanically disconnected after each operation, which presents an opportunity to manually operate the switch disconnecter. The drive can be operated locally via the buttons on the control box (Fig. 31) or remotely using radio control. The control unit (Fig. 32) delivered with the motor drive contains the necessary elements such as contactors, connections, etc. and is

also equipped with an automatic fuse. It can be placed in a panel with the switch disconnecter or in a separate box. Connection with the drive is via a plug-ended cable. Instead of the NM motor drive, the UEMC40K3 type can be used (Fig. 30). The control system is then supplied in a separate order.
